

EVALUATION AND IDENTIFICATION OF SOYBEAN APHID RESISTANCE SOURCES AND MAPPING OF SOYBEAN APHID RESISTANCE LOCI IN EARLY MATURING SOYBEAN GERMPLASM ACCESSION

Results of my Graduate researches at South Dakota State University

**S J Bhusal, G-L Jiang, L Hesler, K Tilmon, J Orf, P Cregan, Q Song,
D Wright, and J Gonzalez**

**Soybean Breeders Workshop
Feb 13-15, 2017**

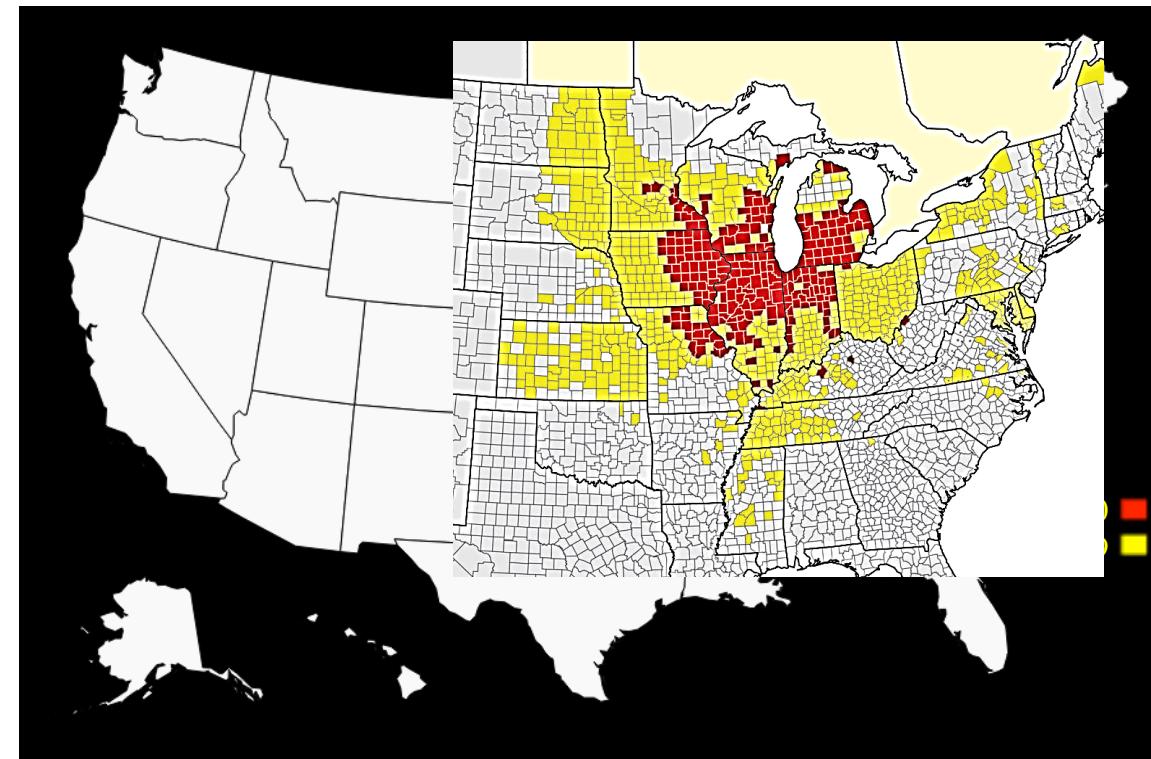

Soybean aphid in the United States

**One of the major pests of
Soybean**

First reported in 2000

**Spread up to 80% of soybean
cultivation area in 2002**

Detected in 30 states by 2009

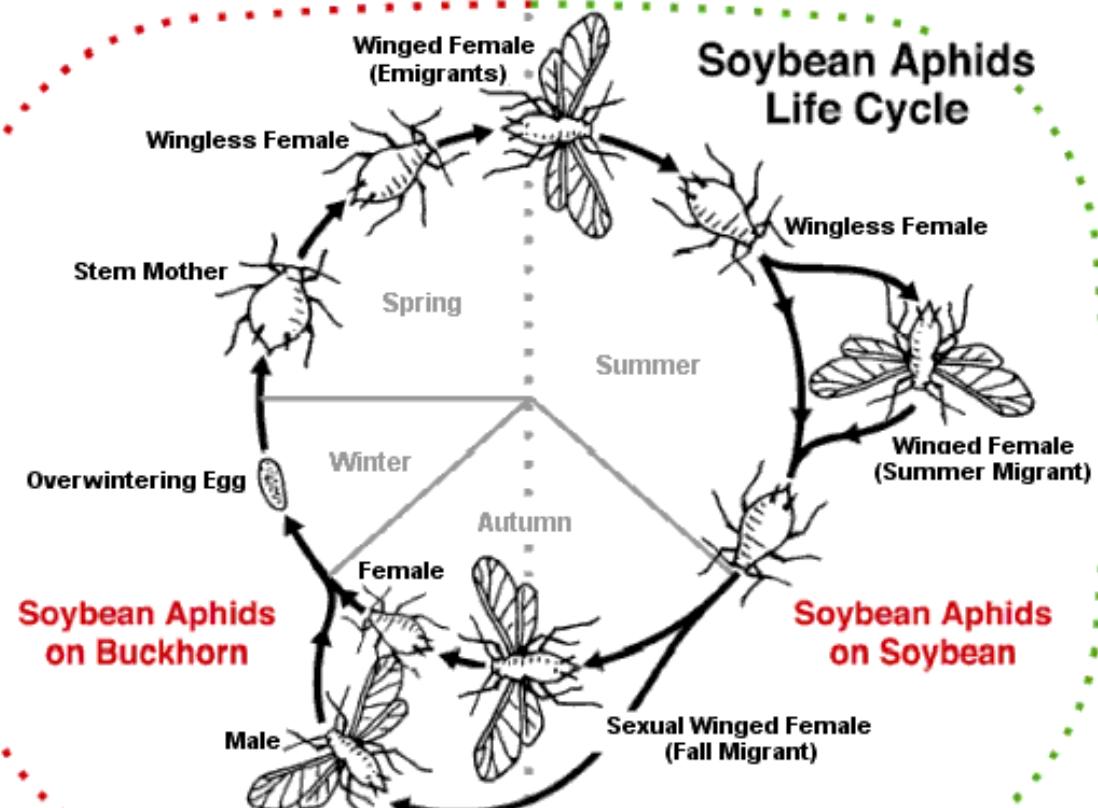

Hartman et al., 2001; Venette and Ragsdale, 2004; Ragsdale et al., 2011

Soybean aphid, *Aphis glycines* Matsumara

- Suck the plant sap
- Transmit viral diseases
- Sooty mold development
- Yield loss of 40% or more on severe infestation

Soybean aphid, *Aphis glycines* Matsumara

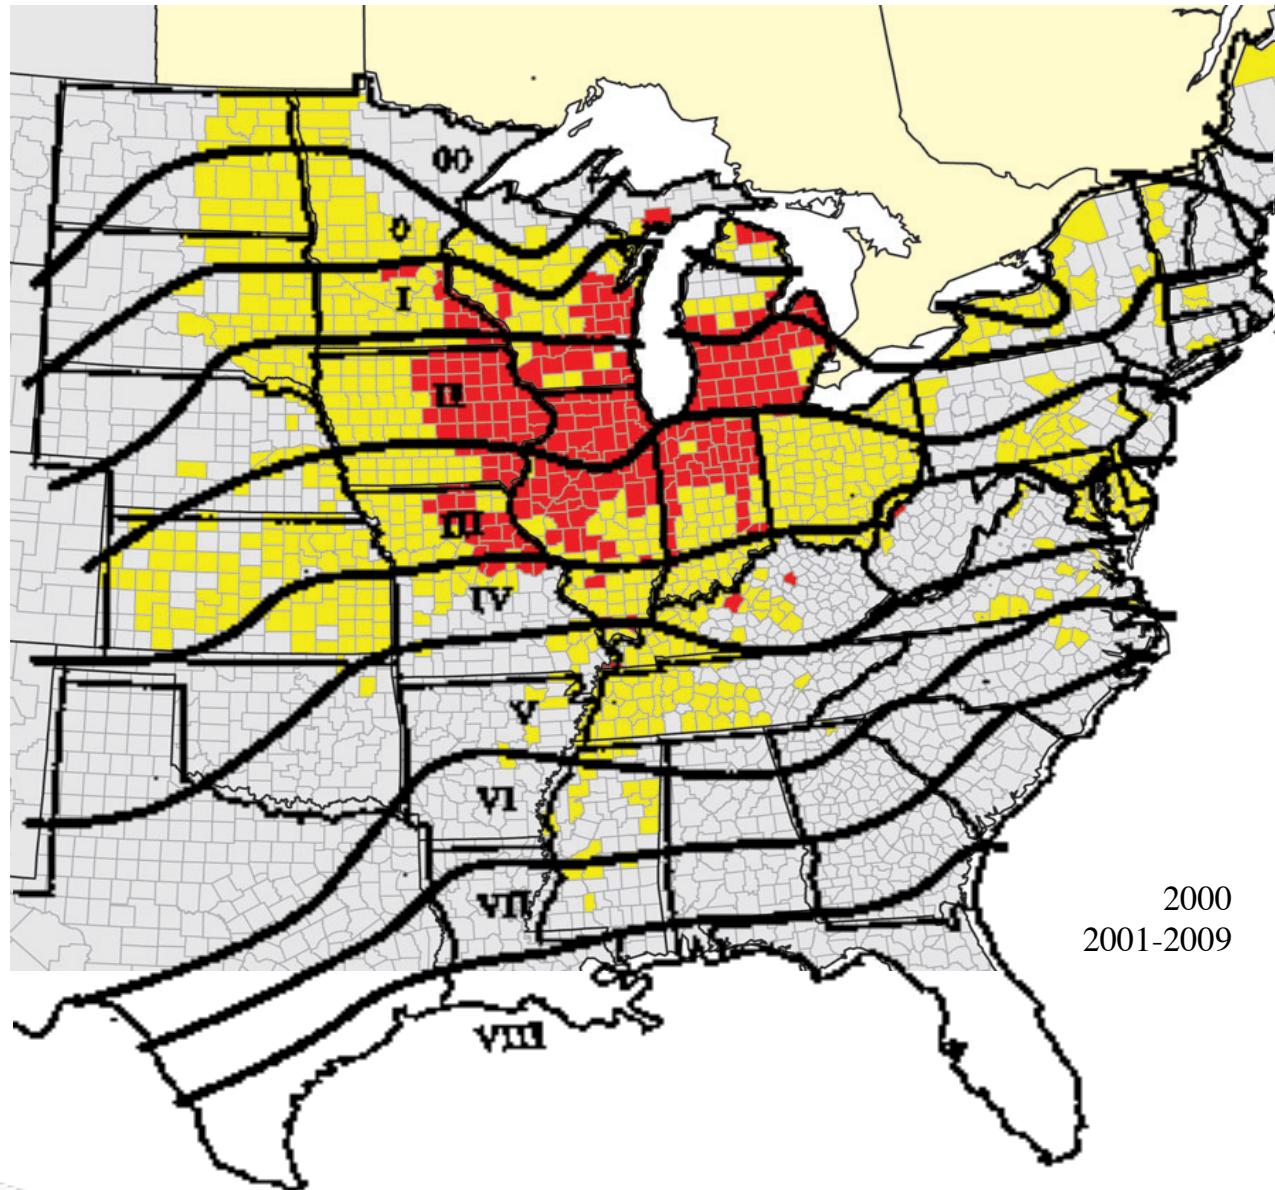

➤ Life cycle: heteroecious holocyclic
(host-alternating with sexual reproduction during part of its life cycle).

Soybean aphid resistance sources

Resistant loci	Source	Maturity Group	Remarks
<i>Rag1</i>	PI 548663 (Dowling)	VIII	Hill et al., 2006
<i>Rag2</i>	PI 243540 and PI 200538	IV VIII	Mian et al., 2008; Hill et al., 2009
<i>Rag3</i>	PI 567543C	III	Zhang et al., 2010
<i>rag4</i> and <i>rag1c</i>	PI 567541B	III	Zhang et al., 2009
<i>rag1b</i> and <i>rag3</i>	PI 567598B	III	Bales et al., 2013
<i>Rag6</i>	P203 from China	VIII	Xiao et al., 2013
....	...		Keeps coming....

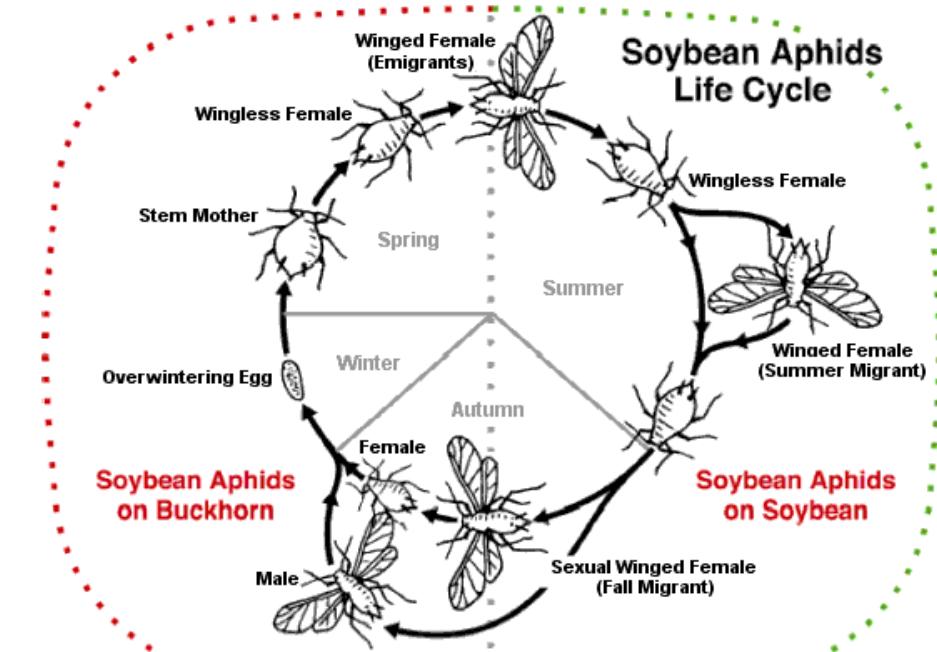

Soybean aphid distribution vs Maturity Group Map

Hartman et al., 2001; Venette and Ragsdale, 2004; Ragsdale et al., 2011

Soybean aphid biotypes

- Biotype 1: Avirulent to known resistance sources
- Biotype 2: Virulent to *Rag1*
- Biotype 3: Virulent to *Rag2*
- Biotype 4: Virulent to both *Rag1* and *Rag2*
-
- Keeps coming.....

Objectives

- **Identify soybean aphid resistance sources in early maturing soybean germplasm accessions**
- **Map and characterize soybean aphid resistance and identify associated markers to be used in soybean breeding programs**

Evaluation of Soybean aphid resistance in Early Maturing soybeans

1.a. Maturity Group (MG) 00 and

0
334 soybean germplasm accessions

326 accessions from MG ‘0’ and
‘00’

6 resistant checks

2 susceptible checks

Location of susceptibility locus on chromosome 17

Conclusions

We identified several early maturing soybean germplasm accessions with different levels of resistance against soybean aphid

Resistant accessions: PI 603712 (MG 0),
PI 567250A and PI 603339A (MG I)

Moderately Resistant accessions: PI 430491 (MG 00)
PI 153214 and PI 437075 (MG I)

PI 603712 carries oligogenic resistance against soybean aphid with two loci on chrom_07 and chromo_16.
